

Specialist Manufacture Ltd.

Environmental Statement

Sol Specialist Manufacture Limited recognises the need for sustainable development and continually aims to improve the environmental effects of our activities.

To achieve this Sol will:

Continuously improve our environmental performance and integrate recognised applicable best practice into our business operations to meet or improve upon relevant legislative, regulatory and environmental codes of practice, Sol will encourage monitoring of our activities.

Develop objectives that target environmental improvements and monitor performance by regular review.

Consider any environmental issues and our employees perspectives in the decision making process.

Develop relationships with employees, suppliers and contractors so that we all recognise our environmental responsibilities in the procurement of goods and services.

Educating our staff so that they carry out their activities in an environmentally responsible manner and encourage feedback.

Encourage appropriate consideration of environmental issues in the professional services we provide to our clients.

Comply with every aspect of environmental legislation.

Provide for the effective use of resources by:-

Promoting waste minimisation:

Involving all staff in the promotion of recycling or finding other uses of by-products whenever economically viable, which in turn will reduce our consumption of resources and improve efficiency in the use of these resources. Promoting & fitting energy saving devices throughout our premises such as motion sensors on sources of light, energy saving bulbs, setting our printers to copy on both sides of a sheet of paper, using energy efficient hand dryers and buying recycled products whenever possible

Provide Management:

For the oversight and review of environmental policies and performance, and allocate resources for their effective direction and implementation whilst promoting the efficient use of resources, energy and fuel throughout our operations. We will create an emergency management plan to ensure that in the unlikely event of an environmental emergency, we can deal with the situation immediately and in an organised manner whilst informing the necessary authorities.

Monitoring:

A method where information is given to all employees on the economic and financial benefits of energy saving. This is a process of involvement for all staff. Reports are completed by staff and given to the nominated manager to highlight & identify energy saving measures in each area of the business, inclusive of actual energy use. Reports on energy use and energy saving measures are then created using this information, which allows the production of an annual plan setting out energy saving targets and their potential achievement. The Senior Management Team reviews this.

Communication:

Internally and externally our environmental policy and performance on an annual basis, and encourage feedback.

Investment:

Sol will invest in new products and processes that have an improved performance in respect of their impact on our environment; this is inclusive of factory equipment such as advanced machinery and also office equipment and consumables such as double-glazing, water saving devices.

Co-operate with:-

The communities in which we operate.

The government, regulatory bodies and other interested parties with the shared vision of being a good and trusted neighbour.

By this policy statement Sol Specialist Manufacture recognises our responsibilities towards protection of the environment, and issues this statement as a commitment of both management and employees to minimising the environmental impact of our operations
